

Harini Maregowda

Engineering Lead & Quality Architect | Quality Engineering & Test Automation | CI/CD & DevOps Governance | Banking, Healthcare & Tax Platforms

Engineering Lead and Quality Architect with over 10 years of experience leading cross-functional engineering teams of up to 9 members across Banking, Healthcare, Tax, CRM, and HRMS domains. Strong experience in technical leadership, solution design, application architecture, mentoring engineers, performance management, and coordinating onshore/offshore stakeholders to deliver scalable, reliable, and maintainable enterprise applications through Agile methodologies.

Profile Summary

- Proven expertise in software development, technical leadership, and solution architecture, with experience designing scalable applications and distributed systems across complex enterprise environments.
- Strong hands-on experience with Java, Spring Boot, JavaScript, REST APIs, microservices, and distributed application architectures, with a focus on building maintainable, scalable, and resilient solutions.
- Experienced in architecting and implementing automation and engineering frameworks using Playwright, Selenium, Java, JavaScript, Cucumber, Serenity BDD, TestNG, JUnit, and REST Assured, applying sound design principles and reusable architecture patterns.
- Experienced in integrating engineering practices into Jenkins and Azure DevOps CI/CD pipelines, leveraging Docker, SonarQube, automated quality gates, and shift-left engineering practices to improve delivery speed and software reliability.
- Strong understanding of API-first development, microservices integration, CI/CD, code quality, design principles, and automated validation, with a focus on embedding quality and reliability throughout the software development lifecycle.
- Experienced in working across healthcare, banking, financial, tax, CRM, Salesforce, and Appian domains, translating complex business requirements into scalable technical solutions while considering security, data integrity, compliance, and maintainability.
- Effective Agile/Scrum technical leader and stakeholder partner, collaborating closely with product, engineering, architecture, backend, DevOps, and business teams to drive technical decisions, resolve complex problems, and continuously improve engineering practices.
- Proven ability to mentor engineers, conduct technical reviews, establish development standards, drive performance improvements, and foster a strong engineering culture across distributed teams.

Work Experience

Synechron Technologies Private Limited
Quality Lead | Bengaluru | June 2024 – Present

- Spearheaded quality and engineering strategy for mission-critical banking platforms, owning architectural direction across automation, front-end validation, API engineering, CI/CD governance, and release-readiness standards.
- Led and mentored a 9-member cross-functional engineering team across automation, front-end, and API development, standardized Playwright, Selenium, TestNG, and JUnit frameworks and established scalable engineering practices.
- Championed shift-left quality and CI/CD governance, institutionalized automated quality gates and represented quality within Jenkins and Azure DevOps pipeline decisions to strengthen release stability and defect prevention.
- Architected cross-layer solutions and integration practices, facilitated front-end/back-end architecture and API-contract decisions while guiding React.js delivery toward responsive, maintainable, and consistent user experiences.
- Established executive-level quality visibility through a real-time metrics dashboard tracking test coverage, defect trends, and release readiness, enabling data-driven delivery decisions.
- Engineered Spring Boot microservices for transaction validation and audit logging, extended ownership beyond quality engineering into production-grade back-end development.
- Governed GitHub development workflow, defined branching strategies, conducted pull-request reviews, and resolved complex integration and merge challenges across the engineering team.

Ernst & Young GDS
Software Development Engineer in Test | Warsaw, Poland | November 2022 – May 2024

- Defined and executed engineering strategy for enterprise applications, drove scalable automation, CI/CD integration, testable architecture, and delivery-quality standards within a 7-member SDET team.

Bengaluru, India

Core Competencies

- Full-stack Engineering Leadership
- Quality Engineering Strategy
- Software Architecture
- CI/CD & DevOps Governance
- Test Framework Design & Standardization
- Front-end & API Quality Engineering
- Solution Architecture
- Cross-Functional Team Leadership
- Project Planning & Execution
- Delivery Management
- Engineering Mentorship & Stakeholder Management

Education

- 2023: Master of Computer Application — Suresh Gyan Vihar University
- 2014: Bachelor of Science — K.L.E.S. Nijalingappa College

Certifications

- Agentic AI & Gen AI | Scaler — Pursuing
- PMP Certification – PMI | 2026
- Salesforce Certified Administrator | Salesforce — 2020
- Microsoft Certified: Azure Fundamentals | Microsoft — 2023
- Microsoft Certified: Azure DevOps Solutions | Microsoft — 2024
- Microsoft Certified: Azure Designing | Microsoft — 2024

- Architected and governed the enterprise automation framework using Selenium WebDriver, TestNG, JUnit, and Serenity BDD, enabling scalable end-to-end and API validation across the application landscape.
- Directed CI/CD quality integration through Jenkins, embedded continuous automated validation into delivery workflow and accelerated release cycles while strengthening regression coverage.
- Shaped application architecture through hands-on development and technical collaboration, delivered React.js onboarding and dashboard components and partnering with Spring Boot teams on scalable, testable API contracts.
- Led complex defect investigation and root-cause analysis, diagnosed multithreading race conditions & optimized thread-pool configurations to improve application stability and reliability.
- Strengthened engineering governance by establishing Git branching and integration workflow and partnering with development leadership on code reviews and architectural decisions.
- Optimized data validation and reporting through advanced SQL development, including joins and stored procedures across Oracle and MySQL environments.

Sutherland Healthcare Solutions

Associate Professional – Application Software Testing | August 2020 – November 2022

- Owned end-to-end quality strategy and regulatory validation for HIPAA-compliant healthcare applications supporting multiple medical facilities, ensured adherence to healthcare standards and government regulations.
- Led quality execution within a 6-member engineering team, established testing priorities, and coverage standards across business-critical healthcare workflow.
- Expanded engineering ownership into front-end development, designed and implemented UI components for imaging protocol software using JavaScript and React.js.
- Championed the integration of quality and development practices, enabled earlier defect identification and improved the reliability of applications operating within a regulated healthcare environment.
- Partnered across technical and functional stakeholders to translate healthcare requirements into testable solutions while maintaining compliance and application quality.
- Strengthened domain expertise in regulated software delivery, balanced functional quality, regulatory obligations, and user-facing application requirements.

TEKsystems Global Service

Senior Software Test Engineer | December 2019 – July 2020

- Directed the end-to-end testing lifecycle for enterprise applications, led a 3-member team across requirements coverage, functional validation, regression, and production-readiness activities while achieving zero post-production defects.
- Architected automation solutions using Selenium WebDriver and TestNG, reduced regression testing effort by 50% and improved execution efficiency across the team.
- Led database quality initiatives for healthcare data systems, prioritized data integrity, validation accuracy, and performance across critical application workflow.
- Established testing priorities and execution standards, aligning team activities with business requirements and delivery timelines while maintaining comprehensive requirement coverage.
- Drove cross-functional defect resolution and quality improvement, collaborating with development stakeholders to identify systemic issues and strengthen application reliability.

Estuate Software Private Limited

Senior Software Test Engineer | April 2019 – December 2019

- Managed quality initiatives for large-scale CRM implementations, led a 6-member team across functional testing, automation, deployment validation, and production-readiness activities.
- Set the technical direction for automation, designing and governing Selenium WebDriver and TestNG suites to improve test execution speed, reliability, and maintainability.
- Championed the transition from manual to automated testing, established Selenium WebDriver as a scalable quality-engineering capability and increased regression efficiency.
- Led comprehensive web and mobile testing, prioritized critical defect identification and maintained quality standards across multiple customer-facing interfaces.
- Strengthened deployment and service reliability through disciplined test planning, execution governance, and collaboration with development stakeholders.

Technosoft, Bengaluru

Software Test Engineer/Trainer | Aug 2016 – Mar 2019

- Led manual and automation testing across enterprise projects, driving comprehensive functional and regression validation.
- Developed and optimized automated test suites to enhance test coverage, execution efficiency, and release quality.
- Mentored and trained new hires on testing methodologies, automation practices, tools, and quality engineering fundamentals.

Technical Skills

API, Back-end & Architecture: REST

Assured, Postman, Spring Boot, Microservices, API Contract Validation, Test Automation Architecture, Quality Engineering Strategy, Architecture Decision-Making, Design Validation

Front-end & Application Technologies:

React.js, Responsive Design, User Experience Validation, Salesforce, Salesforce Administration, Appian, HR Workflow Validation, HTML and CSS

DevOps, CI/CD & Engineering Tools:

CI/CD, Jenkins, Azure DevOps, SonarQube, Docker, Continuous Integration, Pipeline Governance, Git, Version Control, Branching Strategies

Quality Engineering & Testing

Practices: Test-Driven Development (TDD), Behavior-Driven Development (BDD), Shift-Left Testing, Continuous Validation, Test Coverage Analysis, Risk Analysis, Root Cause Analysis, Defect Prevention, Quality Metrics & Reporting, Traceability, Audit Documentation, Quality Gates, Release Readiness Management

Automation & Testing: Playwright, Selenium WebDriver, TestNG, JUnit, Cucumber, Serenity BDD, Java, JavaScript, API Testing, API Contract Validation, Front-end Testing, End-to-End Testing, Regression Testing, Database Testing, Manual Testing, Mobile Application Testing, Web Application Testing, Provar and ACCELQ

Domain Expertise: Banking Systems, Financial Transaction Testing, Tax Compliance Applications, Healthcare Software Testing, HIPAA Compliance, Regulatory Compliance, CRM Testing, Salesforce, HR Workflow Validation

Personal Details

Languages Known: English, Hindi, Kannada, Telugu, German, French, Tamil

Annexure

Credit Memo Intelligence — Banking Domain

Synechron Technologies Private Limited | Quality Lead | Team Managed: 9 Members

- Led the architecture and delivery of automation frameworks for critical banking workflows using **Playwright and JavaScript**, ensured robust validation of end-to-end financial transaction processes.
- Directed the **API validation strategy using Postman**, strengthened transaction accuracy, reliability, and quality coverage.
- Owned front-end engineering direction and overall quality governance, including **execution reporting, traceability, and audit artifacts**.
- Coordinated cross-functional delivery across **React, back-end, and automation teams** within an Agile environment.

Innovation Hive — Tax Domain | 17 Months

Ernst & Young | SDET | Team Collaborated With: 7 Members

- Designed and implemented a **scalable automation framework** for tax compliance applications, established **BDD with Cucumber** and **API validation using REST Assured** as team-wide standards.
- Led collaboration with **Spring Boot microservices teams**, drove ownership of testable API contracts and scalable automation architecture.
- Contributed to framework standardization, automation strategy, and quality engineering practices across the project.

Imaging Protocol Manager — Healthcare Domain | 28 Months

Sutherland Healthcare Solutions | Associate Professional – Application Software Testing | Team Collaborated With: 6 Members

- Led testing operations for healthcare imaging software, ensuring comprehensive functional and integration validation.
- Owned **privacy and regulatory compliance testing**, ensuring adherence to applicable healthcare data protection requirements.
- Drove **process optimization through automation**, improving testing efficiency, consistency, and overall quality coverage.

Appian ACT — CRM/HRMS Domain | 8 Months

TEKsystems Global Services | Automation Specialist | Team Collaborated With: 3 Members

- Led automation development for **Appian-based CRM and HRMS applications**, focusing on scalable and maintainable test solutions.
- Drove adoption of **test-driven development practices** to improve software quality and development feedback cycles.
- Owned validation of critical **HR workflow**, ensured functional accuracy across business processes.

Salesforce CRM — CRM Domain | 8 Months

Estuate Software Private Limited | Salesforce Test Engineer | Team Collaborated With: 6 Members

- Executed comprehensive testing for **Salesforce CRM applications**, covering functional, integration, and business workflow validation.
- Collaborated with cross-functional teams to identify, analyze, and resolve application defects.
- Supported quality assurance activities across CRM releases, ensured alignment with functional and business requirements.

Centricity Business (CB Automation) — Healthcare Domain | 30 Months

Technosoft | Senior Test Engineer | Team Collaborated With: 3 Members

- Led the healthcare automation program end-to-end, defined and executed the overall automation and quality strategy.
- Directed **database testing strategy** to validate data integrity, consistency, and application workflow.
- Established comprehensive **regression testing suites** that continued to support ongoing releases and team-wide quality assurance activities.
